OVERLAY THICKNESS DETERMINATION

PIN 3500.52

I-81, Taft Road to Jefferson Co. Line

Oswego County

November 10, 1970

MEMORANDUM
DEPARTMENT OF TRANSPORTATION

DATE November 10, 1970

SUBJECT P.I.N. 3500.52, I-81 TAFT ROAD TO JEFFERSON COUNTY LINE,
OSWEGO COUNTY, TRANSMITTAL OF REPORT "OVERLAY THICKNESS
DETERMINATION"

FROM Wm. P. Hofmann, Bureau of Soil Mechanics, Room 102, Bldg. 7 *ARS*
By Robert J. Weaver ✓
TO M. D. Graham, Facilities Design Subdivision, Room 404, Bldg. 5 ✓
cc R. H. Edwards, Preliminary Plan Review Bureau, Room 408, Bldg. 5
E. E. Towlson, Region 3
G. W. McAlpin, Technical Services Subdivision, Room 213, Bldg. 7
W. C. Burnett, Engineering Research & Development Bureau,
Executive Plaza
F. W. Memmott, Program Analysis Bureau, Room 310, Bldg. 5

In accordance with a request, dated June 22, 1970, by
Mr. W. H. Ketchum, Regional Design Engineer, Region 3,
we have performed a present serviceability survey of
the pavement on this project, and have prepared an
overlay thickness design. The report transmitted here-
with contains our design analysis. Also included in
the report are:

- 1) A traffic analysis prepared by the Program Analysis Bureau.
- 2) The tabulated results of the present serviceability survey.

Based on our analysis, we recommend that the pavement on
this project be resurfaced using 2-1/2 inches of Item 51-F-
Asphalt Concrete-Type 1A (mixing method-two course) over
Item 51TL-Asphalt Concrete Truing and Leveling Course.

MEMORANDUM
DEPARTMENT OF TRANSPORTATION

DATE October 5, 1970

SUBJECT INTERSTATE ROUTE 81
PIN 3500.52, PAVEMENT ANALYSIS
TAFT ROAD TO JEFFERSON COUNTY LINE, OSWEGO COUNTY

FROM F. W. Memmott, Program Analysis Bureau, Room 301, Bldg. 5 *JWM*
TO W. P. Hofmann, Soil Mechanics Bureau, Room 102, Bldg. 7

To assist you in the preparation of the pavement design analysis for the subject project, we are enclosing ten copies and the original of the necessary traffic analysis.

In summary, we find from our analysis that:

- 1) The equivalent 18,000# axle loads estimated to have occurred on one lane of the project pavement from the time of its opening to traffic in 1961 until the time the serviceability index (P_t) was reduced to 2.5 (1969) is 860,013. The structural number used for this 9-year period was 4.0 and the average daily loading (ADL) was estimated to be 261.80.
- 2) The equivalent 18,000# axle loads estimated to occur on one lane of the project from 1970 to the design year of 1979 is 1,498,435. A structural number of 5.0 and a serviceability index (P_t) of 2.0 was used for this 10 year period. The average daily loading (ADL) for this same 10 year period was estimated to be 410.53.

TRAFFIC DATA FOR DETERMINATION
OF OVERLAY THICKNESS

PROJECT

Interstate Route 81
Taft Road to Jefferson Co. Line
Oswego County
PIN 3500.52

Study Limits

This analysis is limited to the northernmost 10.3 miles of project 3500.52. The section of I-81 that is to be studied starts approximately 10.3 miles south of the Oswego-Jefferson County Line in Oswego County and runs northerly to the Jefferson County Line.

General Information

Reference, BPR circular memorandum dated May 9, 1967 from G. M. Williams.

The applicable design periods and design years, for the pavement structure, for these estimate section types are restated hereafter:

- (a) N/A
- (b) Projects constructed with FAI funds for which the pavement construction was authorized prior to October 24, 1963.

The design period is twenty years after the date of authorization for construction of the initial pavement construction project, etc.

- (c) N/A
- (d) N/A

Reference, March 19, 1969 memorandum from G. M. Williams.

Establish Traffic Data for the following:

- (a) The total equivalent 18-kip single axle load application that will have passed over the traffic lane of the pavement structure during the period of time from its initial opening to traffic to the date when the serviceability index (P_t) will be 2.5 and the overlay is to be placed.

A\N (b)

Section 14 of the Act

Section 15 of the Act

Section 16 of the Act

(b) The total equivalent 18-kip single axle load applications that will have passed over the traffic lane of the pavement structure during the period of time from its initial opening to traffic to the time that the pavement on which an overlay has been placed will have a serviceability index (P_t) of 2.0, which traffic and time period are represented in design at least by a twenty year design period.

Lane Distribution

Reference: Highway Capacity Manual, page 106 "On Upgrades . . . most of the trucks stay in Lane 1,"

Assumptions: ninety-five percent of the lighter trucks use Lane 1. One hundred percent of the heavier trucks use Lane 1. Since passenger cars have little effect on pavement design, assume forty percent in Lane 1 and sixty percent in Lane 2.

a 1970 survey performed by Soil Mechanics Bureau and Region 3 personnel. Previous surveys performed by the Engineering Research and Development Bureau.

b Roughness values were not obtained in 1970 because of a breakdown of the Roughometer used by the Department.

c The Present Serviceability Index is determined from the following formula:
 $\ln \text{PSI} = 1.73 - 0.0053R - 2.67(RD)^2 - 0.0022\sqrt{C+P}$

d The Present Serviceability Rating is based on the evaluation of the rideability of the highway by a panel of raters.

e PSI values in parentheses are based on RD and C+P values determined in 1970 and on R as determined in 1969.

DESIGN OF PAVEMENT OVERLAY
(Ref.: AASHTO Interim Guide)

A. Known

1. Authorized 1959, ∴ design year = 1979.
2. Constructed under Contract F1544 59-22.
3. Open to traffic 1961.
4. Pavement section (from plans):

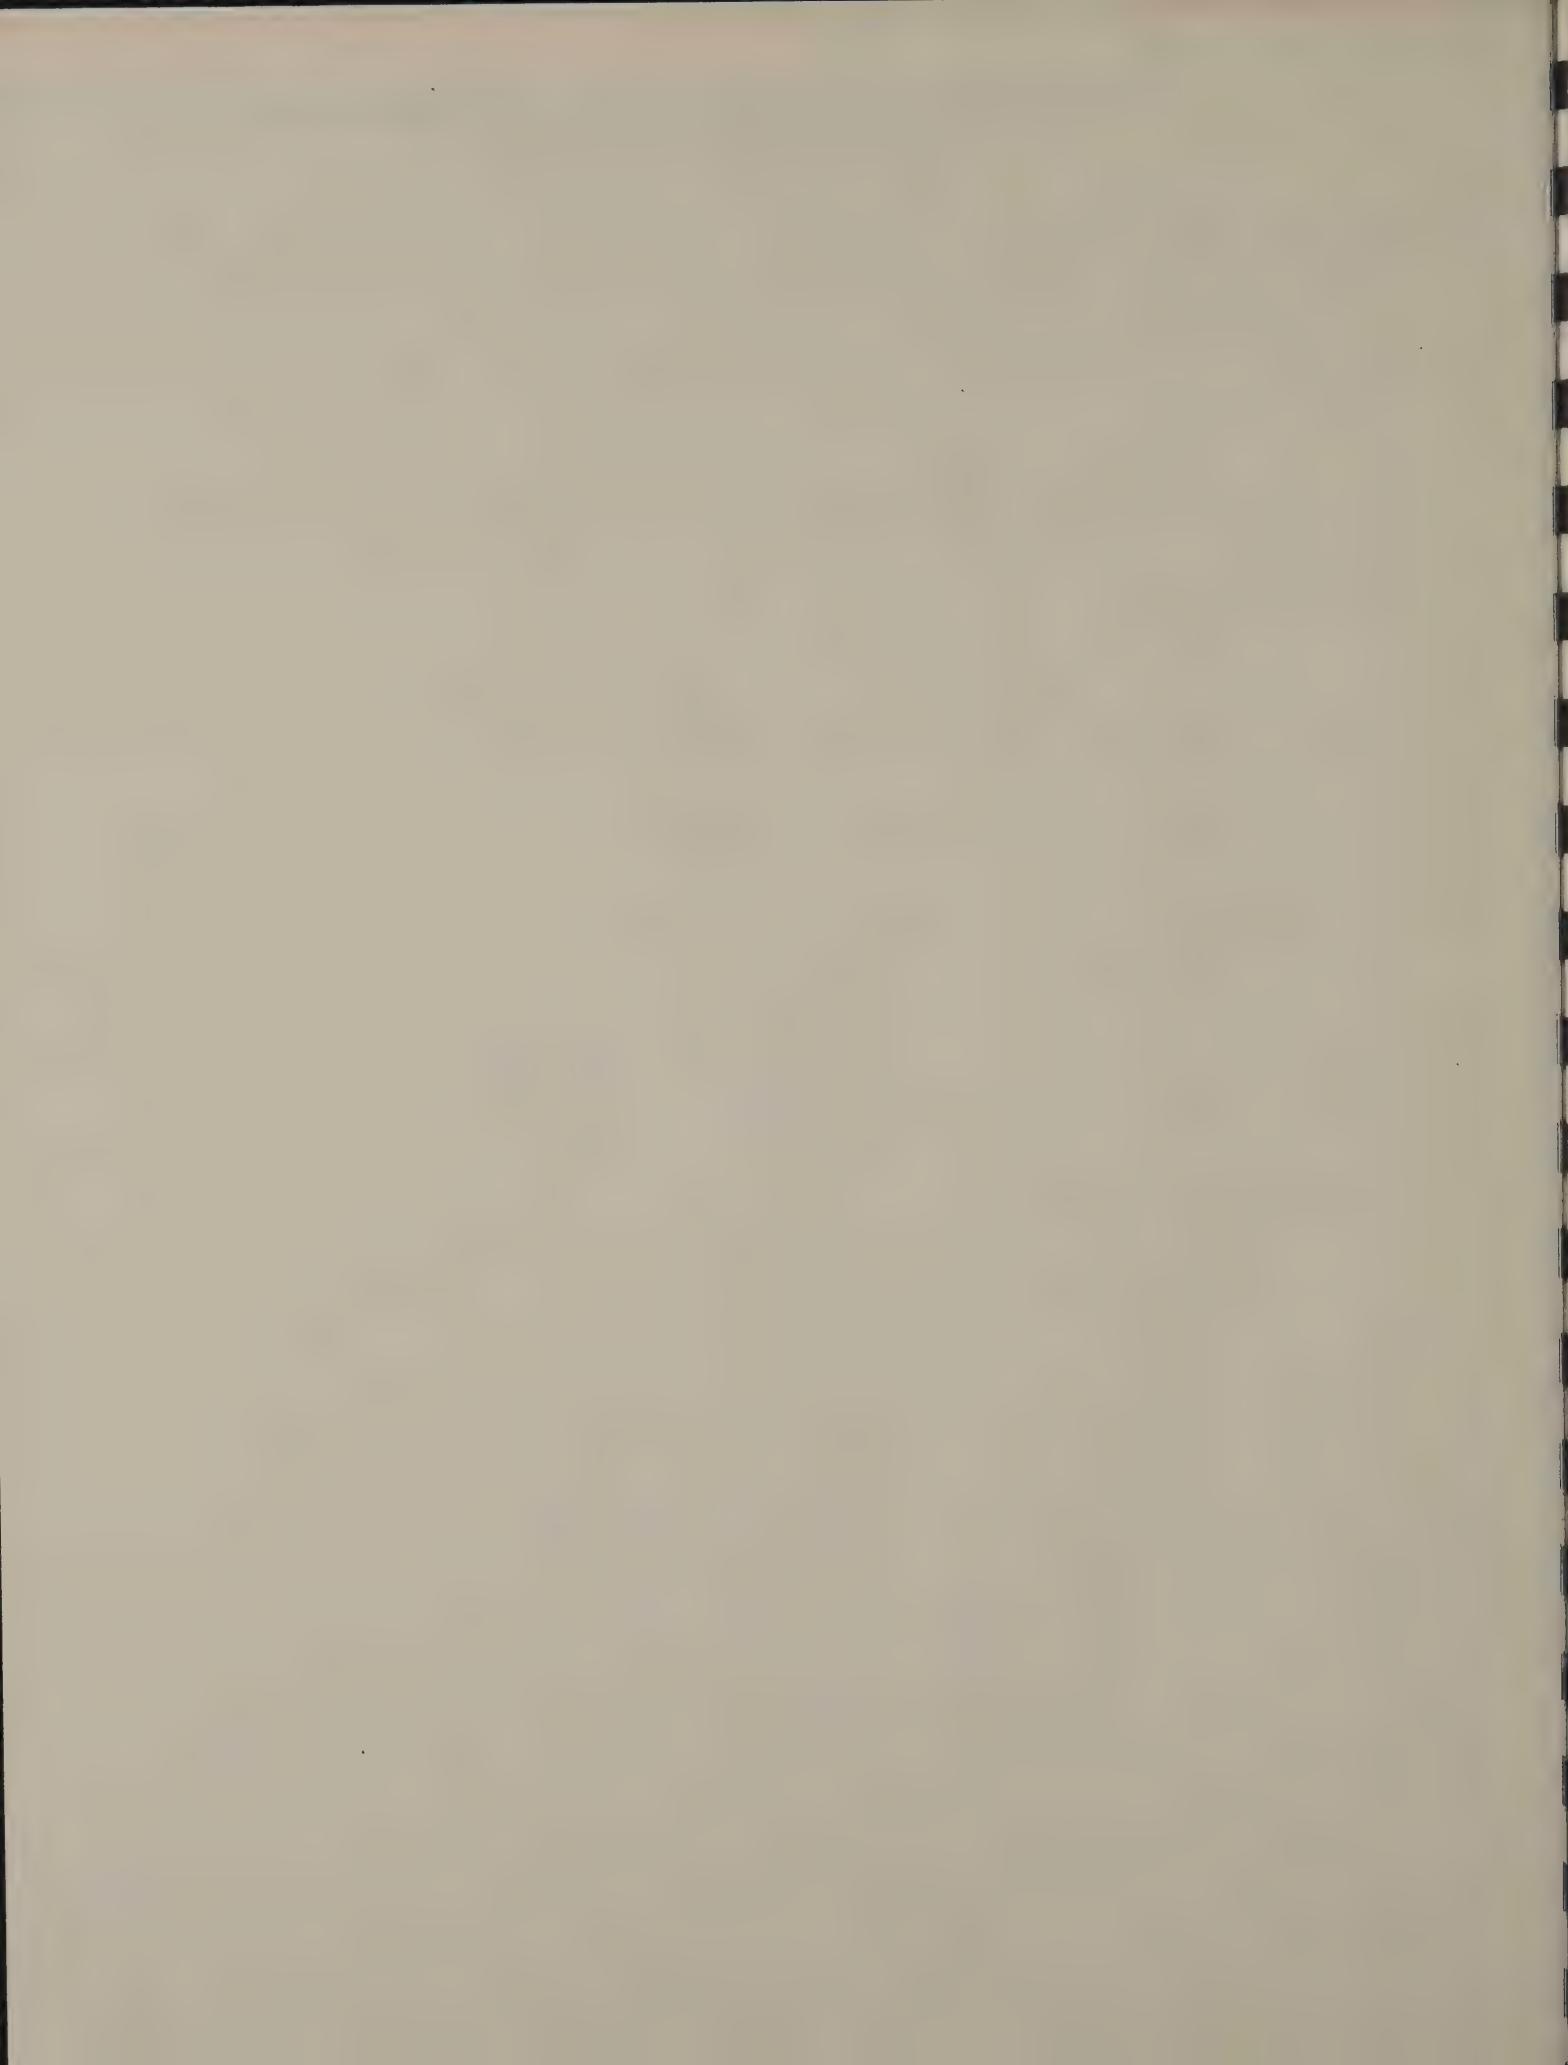

2½ ins	Item 51	asphalt concrete surfacing		
3 "	" 45SY	"	"	base
4 "	" 45X	"	"	broken stone, slag, or gravel base
6 "	" 39A	"	"	sand & gravel subbase
6 "	" 39	"	"	"

B. Assumptions

1. ADL (1961 to 1969) = 261.80 18 KEAL's
2. ADL (1970 to 1979) = 410.53 18 KEAL's
3. Present Serviceability Index of 2.5 reached in 1969
4. Coefficients of relative strength:

$$\begin{aligned}
 \text{Item 51} \quad \alpha_1 &= 0.44 \\
 " 45SY \quad \alpha_2 &= 0.34 \\
 " 45 \quad \alpha_2 &= 0.14 \\
 " 39A \quad \alpha_3 &= 0.11 \\
 " 39 \quad \alpha_3 &= 0.11
 \end{aligned}$$

5. Regional Factor(K) = 2.

SOIL MECHANICS BUREAU

PROJECT: PIN 3500.52

Sheet 2 of 2 Sheets
Prepared by: A. R. Schimone Date 11-6-70
Checked by:

C. Computations

1) Total 18 KEAL's mid-1961 to mid-1969 =

$$= 261.8 \times 8 \times 365 = 764,000$$

2) " " " mid-1969 to mid-1979 =

$$= 410.55 \times 10 \times 365 = 1,498,434$$

3) " " " mid-1961 to mid-1979 = 2,262,434

4) SN of existing pavement

Item 51:	.44	\times	2.5	=	1.10
" 45 SY:	.34	\times	3	=	1.02
" 45 :	.14	\times	4	=	.56
" 39 § 39A:	.11	\times	12	=	1.32
				<hr/>	
				SN	= 4.00

5) Determine soil support value (S)

Use chart 400-2

for above values of S_{ER} and 764,000 18 KEAL's

$$S = 3.3$$

6) Determine SN needed to give $\text{PSI} (p_e) = 2.0$ in 1979

Use chart 400-1

for above values of S_{ER} and 2,262,434

$$SN = 4.45$$

7) Thickness of overlay = $\frac{0.45}{0.44} = 1.02$ ins.

Use minimum overlay thickness: 2 1/2 ins Item 51
over Item 51 TL (tracing & leveling course).
